Message from the Secretary

Dear Members,

For me, serving as the Secretary of ASSP Kuwait Chapter is more than taking up a position—it is both an honor and a responsibility. Over the years, this position has been held and distinguished by many respected leaders and pioneers of the HSE profession. I feel privileged and humbled to follow in their footsteps and grateful for the opportunity to contribute, in my own way, to the legacy they have helped build.

I strongly believe that the real strength of ASSP Kuwait Chapter is our people—our members, volunteers, professionals, students, industry partners and everyone who contributes their time, knowledge and experience to our professional community. As we move through the 2026–27 term, I would like to see our Chapter reach more people and create more opportunities for professionals to connect, learn, contribute and grow.

One of our key priorities is to increase our membership and strengthen member engagement. For me, membership growth is not simply about increasing a number. Every new member brings new experience, new ideas, new energy and another opportunity for us to learn from each other.

Through technical programs, professional development, mentoring, networking, volunteering, industry collaboration and knowledge sharing, we want ASSP Kuwait Chapter to be a platform where professionals at every stage of their career feel welcomed, connected and encouraged to contribute.

A major milestone in this journey is now approaching—the 13th International HSSE & Loss Prevention Professional Development Conference (13th PDC) and GCC HSSE Excellence Awards 2026, scheduled for 4–5 October 2026. The PDC is much more than a two-day conference. It is a platform where our profession comes together—where experiences and best practices are shared, new ideas are discussed, innovations are introduced, achievements are recognized and lasting professional relationships are built.

As Secretary, I look forward not only to fulfilling the responsibilities entrusted to me, but also to listening to our members, learning from our senior professionals, encouraging our young and emerging professionals, and working closely with our leadership, committees, volunteers and industry partners. I believe there is much more we can achieve when we work together with a shared purpose and a genuine willingness to contribute.

Together, let us make the 13th PDC and GCC HSSE Excellence Awards 2026 another proud milestone for ASSP Kuwait Chapter.

Prabeesh MP

Behind every successful PDC are people—people who volunteer their time, share their knowledge and ideas, coordinate behind the scenes, support one another and participate with a common purpose. That is why I sincerely invite every member of our Chapter to be part of this journey. You do not need a position to contribute; you only need the willingness to participate. Every contribution matters, every volunteer matters, and every member matters.

“Let us connect, contribute, inspire and grow together”.

Message from the Head of Committees

Dear Members,

It is a privilege to support and coordinate the various committees of ASSP Kuwait Chapter, each of which plays an important role in advancing our professional, technical, outreach and member-focused activities.

Our focus for the 2026–27 term is to strengthen coordination between the Executive Committee and all functional committees, enabling them to work with greater clarity, collaboration and effectiveness. While every committee has its own objectives and responsibilities, our collective strength comes from working together towards the common goals of the Chapter.

A key priority will be to make committee functioning more structured, responsive and supportive—facilitating timely communication, sharing resources and ideas, encouraging cross-committee cooperation, and helping remove practical barriers that may affect the progress of planned activities.

Equally important is creating greater opportunities for our members to participate, contribute their expertise and benefit from Chapter initiatives. Whether through technical programs, training, professional development, research, sustainability, outreach, student engagement or networking, we want every member to feel connected and valued.

I look forward to working closely with the Executive Committee, Committee Heads, volunteers and members to strengthen our collective efforts and further enhance the value ASSP Kuwait Chapter brings to the HSE community.

Mustakbeg Akberbeg Mirza

“Together, through collaboration and active participation, we can make our Chapter stronger, more connected and more effective.”

01

Certification & Awards

ISO 9001:2015 Certification

The ASSP Kuwait Chapter is proud to have been awarded the ISO 9001:2015 Certification, an internationally recognised standard for Quality Management Systems (QMS). This achievement reflects the Chapter's commitment to delivering high-quality services, ensuring member and stakeholder satisfaction, and continually improving its processes through an effective quality management system. It demonstrates the Chapter's dedication to operational excellence, consistent performance, and continuous improvement while advancing the health and safety profession through quality-driven programs, professional development, and member engagement.

ASSP Platinum level Chapter Award

The ASSP Kuwait Chapter has been recognised for the 8th time with the prestigious Platinum Level Chapter Award, including for the 2023-2024 term. This distinguished recognition is the highest honour awarded to ASSP chapters and reflects the Chapter's outstanding performance, strong leadership, active member engagement, and continued commitment to advancing the occupational safety and health profession. Achieving Platinum status for the eighth time highlights the Chapter's consistent excellence in delivering high-quality programs, professional development opportunities, and meaningful contributions to the HSE community in Kuwait.

ASSP Kuwait Chapter Hosts Technical Meet on Major Hydrocarbon Industry Losses

The American Society of Safety Professionals (ASSP) – Kuwait Chapter, in coordination with its Sustainability, Innovation & Research Committee, successfully organized an online Technical Meet on 13 August 2026 on the topic “100 Largest Losses in the Hydrocarbon Industry 1974–2025.”

Event Highlights

The session was delivered by **Ms. Jenni Morrison Brown**, Global Energy and Power Data Architect within Marsh's Risk Engineering Technology and Innovation function and co-author of Marsh's 100 Largest Losses report.

Drawing on major loss events and industry experience, the session provided valuable insights into the causes and consequences of significant incidents across the hydrocarbon sector. Discussions highlighted recurring process safety failures, risk factors and lessons learned, reinforcing the importance of learning from past incidents to prevent recurrence and strengthen operational resilience.

The presentation also emphasized the importance of effective process safety management, operational discipline, risk management, asset integrity and proactive safety leadership in preventing catastrophic incidents and minimizing potential losses.

The Technical Meet attracted 45 ASSP members and aspiring safety professionals, providing an excellent platform for professional learning, knowledge sharing and engagement. The active participation reflected the continued interest of the HSE community in strengthening process safety knowledge and applying lessons learned from major industry events.

ASSP Kuwait Chapter extends its sincere appreciation to Ms. Jenni Morrison Brown, SENERGY – Optimal Solutions, the organizing committee, supporting partners and all participants for contributing to the successful session.

“Through such technical programs, ASSP Kuwait Chapter continues its commitment to professional development, knowledge sharing and advancing safer and more resilient industry practices.”

ASSP KUWAIT CHAPTER Conducts Technical Training On HAZOP: Strengthening Process Safety Through Systematic Risk Analysis"

The ASSP Kuwait Chapter successfully conducted an interactive online technical training session on "HAZOP: A Systematic Approach to Process Hazard Identification and Risk Management" on 29 July 2026. The session brought together 84 safety professionals, HSE managers, process engineers and technical specialists from various industries, reflecting strong interest in process safety and risk management.

The session was delivered by Dr. Siddharajsinh Kunvardiya, an experienced Environment, Health & Safety professional with more than 15 years of specialized experience across specialty chemicals, agrochemicals, pharmaceuticals and petroleum industries. His professional expertise covers process safety, risk management, regulatory compliance and operational excellence.

Key Takeaway
HAZOP provides a structured way to ask "What could go wrong?"—and identify the safeguards and controls needed before it does.

Why HAZOP Matters

Effective HAZOP studies help organizations prevent major accidents, reduce operational risks, enhance worker safety, improve process reliability, and strengthen safety culture by identifying potential problems before they develop into incidents.

The training provided participants with a practical understanding of the HAZOP methodology, including the systematic identification of process hazards and operational deviations using HAZOP guidewords. Key areas covered included guidewords and process parameters, HAZOP team roles and responsibilities, evaluation of causes and consequences, existing safeguards and risk controls, practical industrial applications, and real-world case studies.

The interactive format, including live Q&A and a knowledge assessment quiz, encouraged active participation and helped reinforce the learning outcomes. Participation certificates were provided to eligible attendees who completed the required session activities.

The session reinforced that HAZOP is more than a compliance exercise; when effectively implemented, it supports prevention of major accidents, reduction of operational risks, improved worker safety, enhanced process reliability and a stronger organizational safety culture.

ASSP Kuwait Chapter Executive Committee Heads 2026-27 Orientation and Familiarization Meeting

The ASSP Kuwait Chapter Executive Committee conducted a Committee Heads Orientation and Familiarization Meeting on 23 June 2026 at Calicut Live Restaurant, Fahaheel, warmly welcoming the newly appointed Committee Heads for the 2026-27 term and providing them with an overview of their respective roles, responsibilities and Chapter expectations.

Mr. Syed Kashif Vali, Vice President, welcomed the Committee Heads, introduced the Executive Committee for the new term and congratulated them on taking up their leadership responsibilities. He emphasized the importance of teamwork and active involvement in supporting the Chapter's objectives.

Mr. Prabeesh M.P., Secretary, provided an overview of the roles and expectations of the various committees and highlighted the Chapter resources and support available to enable Committee Heads to effectively plan and execute their assigned responsibilities.

Addressing the gathering, Mr. Mohamed Yusuff A., President, welcomed the new leadership team and shared his vision for the 2026-27 term. He encouraged Committee Heads to bring forward new ideas, actively engage their members and maintain close coordination with the Executive Committee. The session also provided an opportunity to clarify responsibilities, discuss initial plans and address queries related to committee functioning.

Distinguished Toastmaster Award 2026

Congratulations to Dinesh Kumar Pal DTM on achieving the prestigious Distinguished Toastmaster (DTM) designation!

This is a proud moment for the ASSP Kuwait Toastmasters Club also where you started the Journey with Toastmasters

Your journey is a true inspiration. At a stage when many choose to slow down as they approach retirement, you embraced learning, leadership, and personal growth with unwavering commitment and successfully fulfilled the rigorous educational and leadership requirements to earn Toastmasters' highest recognition.

Your achievement is a powerful reminder that dedication, perseverance, and a willingness to learn can make us better leaders in both our professional and personal lives, regardless of age or stage in life.

Heartiest congratulations on this remarkable milestone.

Wishing you continued success, good health, and many more achievements in the years ahead!

Article of the month

Safety Beyond the Workplace: World Humanitarian Day

Article Prepared by: **Mr.Narendra Patel , CSP, Unit Head- PCIC**

HSE Article for the Month-

SAFETY BEYOND WORKPLACE

Safety is not limited to our workplaces. The same principles we practice every day—risk awareness, preparedness, emergency response, communication and protection of people—become critically important during humanitarian emergencies.

World Humanitarian Day, observed annually on 19 August, recognizes humanitarian workers and reminds us of the importance of protecting people affected by crises. For HSE professionals, it is also an opportunity to reflect on how our safety knowledge can contribute beyond the workplace.

“FACT CHECK | Humanitarian Action at a Glance- 19 AUGUST World Humanitarian Day is observed every year.”

4 CORE PRINCIPLES

4 CORE PRINCIPLES OF HUMANITARIAN ACTION

Guiding today.
A more humane tomorrow.

PEOPLE
COMMUNITIES
DIGNITY
HOPE

HUMANITY

Protect life, health and dignity and reduce human suffering.

PEOPLE FIRST

IMPARTIALITY

Provide assistance based on need, without discrimination.

AID BASED ON NEED

NEUTRALITY

Do not take sides in conflicts or controversies.

FOCUS ON PEOPLE,
NOT POLITICS

INDEPENDENCE

Humanitarian action is independent and autonomous.

FREE TO ACT
IN THE BEST INTEREST
OF PEOPLE

Humanity • Impartiality
Neutrality • Independence

1 COMMON PURPOSE

HUMANITARIAN ACTION
DIFFERENT PEOPLE. A SHARED HUMANITY.

1 COMMON PURPOSE

Protecting life,
reducing suffering and
preserving human dignity.

STRONGER PEOPLE.
STRONGER COMMUNITIES.

Protecting life, reducing suffering and
preserving human dignity

PREPAREDNESS: Where HSE Meets Humanitarian Action

Emergencies can occur with little warning. Fires, floods, earthquakes, major accidents and other crises can disrupt normal life within minutes. Preparedness helps reduce confusion and enables a faster, safer and more coordinated response.

HSE professionals already understand many of these fundamentals through emergency response plans, drills, first aid, evacuation procedures, hazard assessments and incident management. These skills are equally valuable within our homes and communities.

WORLD HUMANITARIAN DAY

THE HUMAN SIDE OF SAFETY

At the center of both HSE and humanitarian work is a simple principle: people come first. During emergencies, children, older persons, injured people, persons with disabilities and displaced families may require additional assistance.

However, helping must also be safe. Untrained intervention can sometimes create additional victims. Follow the instructions of emergency authorities, maintain clear access for responders and never expose yourself or others to unnecessary risk.

A safe responder can continue helping. An injured responder becomes another person needing help.

BE READY TO HELP
Communities Count on People Like You.

Know your local emergency contacts
Keep important numbers saved and easily accessible.

Learn basic first aid and CPR
Be prepared to provide immediate assistance.

Know exits and assembly points
Be aware of safe evacuation routes.

Keep essential medicines and emergency supplies accessible
Be prepared for at least a few days.

Follow information from reliable authorities
Avoid rumours and unverified information.

Check on vulnerable people when safe to do so
Support children, older persons, injured people and those with disabilities.

Never obstruct emergency responders
Keep access routes clear and give way to emergency vehicles and personnel.

Volunteer responsibly through recognized organizations
Support humanitarian efforts in a safe and organized way.

“A safe responder can continue helping. An injured responder becomes another person needing help.”

SAFE PEOPLE STRONGER COMMUNITIES

FROM WORKPLACE SAFETY TO COMMUNITY RESILIENCE

A strong safety culture should travel with us when we leave the workplace. Hazard recognition, situational awareness, emergency preparedness, teamwork and effective communication are life skills—not simply occupational requirements.

As HSE professionals, we can use our knowledge to educate families, support community preparedness and encourage responsible action during emergencies. Sometimes a simple conversation about first aid, evacuation or emergency contacts can make a meaningful difference when a real emergency occurs.

A Safety Message for Everyone

PREPARE before an emergency.
RESPOND without creating additional risk.
SUPPORT those who need help.
LEARN so we are better prepared next time.

“Safety Beyond the Workplace means using our knowledge not only to protect employees, but also our families, neighbors and communities.”

PREPARED TO RESPOND • READY TO PROTECT • TOGETHER WE ARE RESILIENT

TAKE ACTION
for a safer tomorrow

U.S. Steel Clairton Coke Works Explosion Pennsylvania, USA - 2025

"When an Informal Practice Becomes a High-Risk Operation"

What happened:

On August 11, 2025, employees and contractors were using pressurized water to clean a coke oven gas isolation valve while preparing for maintenance. **Although this valve-washing practice had been used at the facility for at least three years, no formal written procedure had ever been developed** for safely performing the valve-washing operation.

During the operation, pressurized water became trapped between the valve gates, causing pressure to exceed the cast-iron valve's capacity. The valve failed catastrophically, releasing toxic and flammable coke oven gas, which subsequently ignited and exploded. The incident resulted in two fatalities, 11 injuries - five of them serious - and approximately \$52.5 million in property damage.

Why it matters

A work practice can become "normal" without necessarily becoming safe. In this case, the valve-washing method had been used previously, but the hazards associated with applying high-pressure water to a lower-pressure valve had not been adequately identified or controlled.

Repeated success can create overconfidence in an informal practice. Just because a task has been performed many times without an incident does not mean the risks are fully understood or that adequate safeguards are in place.

U.S. Steel Clairton Coke Works Explosion Pennsylvania, USA - 2025

"When an Informal Practice Becomes a High-Risk
Operation"

Key lesson

"We've done it before" is not the same as "We've proven it is safe."

The valve-washing practice had been used for years, yet no formal written procedure had been developed for safely performing the operation. Without a formal procedure and adequate hazard analysis, there was no clearly defined safe sequence of work or sufficient controls addressing the overpressure hazard.

Past experience should never replace proper risk assessment, documented procedures, and effective controls.

Takeaway

"Past success is not proof of safety."

Before an informal practice becomes routine: assess the hazards, establish a safe procedure, understand the equipment limits, and verify that the safeguards are effective.

A task may have been completed successfully many times, but if the hazards have never been properly assessed and the safe method has never been formally established, the risk is still there.

PDC 2026 Outreach

ASSP Kuwait Chapter

Leadership
Meets EQUATE
EHS Team

“ASSP-KC Leadership Meets EQUATE EHS Team to Strengthen PDC Outreach 2026”

PDC Highlights

As part of its ongoing industry engagement and promotional activities for the upcoming 13th International HSSE & Loss Prevention Professional Development Conference (PDC) and GCC HSSE Excellence Awards 2026, the Executive Leadership of the American Society of Safety Professionals – Kuwait Chapter (ASSP-KC) visited EQUATE Petrochemical Company on 25 August 2026.

The ASSP-KC delegation, comprising the Chapter Chairman, President and Secretary, met with Mr. Abdulqader Abdullah Al-Qabandi, EHS Director, EQUATE, and his team. During the meeting, the delegation shared updates on the preparations for the upcoming PDC and extended an invitation for EQUATE's participation and continued engagement in this important professional event.

The discussion highlighted the significance of strengthening collaboration between professional associations and industry leaders in promoting HSSE excellence, knowledge sharing, innovation and continuous professional development. The delegation also briefed the EQUATE team on the conference program and its 2026 theme.

“Intelligent HSSE: Leveraging AI to Strengthen Process Safety, Drive Sustainability, and Enhance Operational Excellence.”

HSE Quiz

Quiz Prepared by: Shaher Al-Shammari, ISO 14001 Certified

SAFETY QUIZ

1. When carrying out an emergency vulnerability assessment, which should be considered?

- A) Internal hazards only
- B) External hazards only
- C) Both internal and external events that could affect people and operations
- D) Only emergencies that have happened previously

2. A major chemical spill has occurred in a warehouse and is threatening a nearby drainage system. What is the BEST sequence of actions during the first 10 minutes?

- A) Identify the chemical, immediately begin cleaning the spill, isolate the drainage system, and then notify the emergency response team.
- B) Raise the alarm, protect and evacuate people at risk, identify the chemical and immediate hazards, isolate the spill area and protect/isolate the drainage system, then control the source and contain the spill if it is safe and within the responders' capability.
- C) Isolate the drainage system first, stop the source of the spill, and then determine whether evacuation and emergency notification are required.
- D) Evacuate the warehouse and wait for the emergency response team before taking any action to protect the drainage system.

3. During an emergency, trained employees remain behind to safely shut down critical equipment. What is MOST important?

- A) They understand the conditions that require them to stop the shutdown and evacuate
- B) They have a direct communication link with the control room throughout the shutdown
- C) A supervisor confirms that the shutdown procedure is being followed correctly
- D) An alternative escape route is identified before the shutdown begins

4. A facility is preparing for several possible emergencies: fire, toxic gas release, severe weather, and an external chemical incident. Should the same protective action be used for all four?

- A) Use evacuation as the main response, with exceptions for specific hazards
- B) Use the same initial response to reduce confusion, then adjust if conditions change
- C) Select evacuation, shelter-in-place, or other actions based on the hazard and expected exposure
- D) Establish one standard response unless emergency services advise otherwise

5. During a major emergency, some important details are still not confirmed. What is the BEST communication approach?

- A) Communicate confirmed facts first and delay protective instructions until the situation is fully assessed
- B) Communicate what is known, acknowledge what is not yet known, and provide immediate protective instructions
- C) Issue an initial warning with limited details and provide instructions after confirmation
- D) Communicate only information that has been confirmed by both management and emergency services

SAFETY QUIZ (CONTINUED)

6. A facility has a PA system, radios, mobile alerts and emergency telephones. During a drill, the PA system fails but the other systems continue to work. What emergency-planning principle does this demonstrate?

- A) Redundancy, because other independent communication methods remain available
- B) Reliability, because most of the communication systems operated correctly
- C) Contingency planning, because the emergency team continued the exercise
- D) Resilience, because employees were still able to complete the evacuation

7. A major industrial incident could also affect the surrounding community. Which approach BEST supports community resilience?

- A) Provide emergency information to authorities and allow them to manage external communication
- B) Develop internal response arrangements and share them with external agencies when requested
- C) Establish advance coordination, communication and response arrangements with authorities, emergency services and relevant stakeholders
- D) Maintain sufficient internal emergency resources to reduce dependence on external organizations

8. After three emergency drills, the SAME communication failure appears each time. Corrective actions were recorded after every drill. What is the MOST important concern?

- A) The emergency communication procedure may require additional detail
- B) Employees may require more frequent communication training
- C) The exercise scenarios may not be suitable for the existing communication system
- D) Corrective actions are being recorded but are not effectively removing the underlying problem

9. A new chemical process is installed at an existing facility. The existing Emergency Response Plan was prepared before this process was introduced. What should be done FIRST?

- A) Assess the new hazards and emergency scenarios and determine whether existing arrangements remain suitable
- B) Update the emergency plan using the chemical's SDS and train affected employees
- C) Conduct an emergency exercise based on the new process to identify weaknesses
- D) Review evacuation routes and emergency equipment around the new process area

SAFETY QUIZ (CONTINUED)

10. During an actual emergency, an unexpected hazard makes the normal evacuation route unsafe. What is the BEST action?

- A) Stop the evacuation and complete a risk assessment before selecting another route
- B) Continue using the planned route because it has already been risk-assessed
- C) Use the safest available alternative evacuation route, then formally assess the new risk and review the emergency plan after the event
- D) Wait for the emergency response team to complete an assessment before allowing personnel to move

ABOUT ASSP

KUWAIT CHAPTER

Founded in 2000, the American Society of Safety Professionals (ASSP) Kuwait Chapter is a leading voluntary, non-profit professional organization dedicated to advancing Health, Safety and Environmental (HSE) excellence across Kuwait and the wider region. As part of the global ASSP community, the Chapter brings together HSE professionals, industry leaders, academics and safety practitioners to promote knowledge sharing, professional development and a strong culture of safety.

Over the past two decades, ASSP Kuwait Chapter has established itself as one of the most active professional HSE bodies in the region through a wide range of initiatives, including international conferences, technical meetings, professional development programs, specialized training, workshops, awareness campaigns, community outreach and student engagement. These activities provide professionals with opportunities to enhance their technical knowledge, exchange experiences and remain updated with evolving HSE practices, standards and technologies.

One of the Chapter's major achievements is its International HSSE & Loss Prevention Professional Development Conference & Exhibition, which has brought together leading HSE professionals, technical experts, industry organizations and exhibitors from Kuwait and around the world. The Chapter also organizes regular technical sessions and professional development activities covering diverse areas of occupational safety, process safety, industrial hygiene, environmental protection, emergency preparedness and emerging HSE technologies.

ASSP Kuwait Chapter strongly believes that recognizing excellence is essential to advancing the safety profession. Through initiatives such as the ASSP GCC HSE Excellence Awards and other professional recognition programs, the Chapter celebrates outstanding contributions, innovative practices and leadership in HSE. These initiatives encourage professionals and organizations to continuously improve their safety performance and share successful practices with the wider HSE community.

The Chapter also places significant emphasis on community outreach, student engagement and the development of future safety professionals. By connecting experienced practitioners with young professionals and students, ASSP Kuwait provides opportunities for mentoring, networking, learning and career development. Its awareness initiatives further extend the importance of health, safety and environmental responsibility beyond the workplace and into the wider community.

With more than two decades of professional service, ASSP Kuwait Chapter continues to evolve through innovation, collaboration, knowledge sharing and continuous improvement. Its commitment to emerging technologies, professional development and regional cooperation reflects its vision of becoming a recognized center of HSE excellence, contributing to safer workplaces, healthier communities and a more sustainable future.
